

## ADAMSON ADDS AN ULTRA COMPACT LINE ARRAY SERIES TO THE LINE UP

Adamson's dedication to advancing technology through passionate in-house R&D is the source of our continued success in bringing significant, cutting-edge technology to the end-user. Our continued pursuit for sonic excellence has led to a number of important patents in key loudspeaker technologies being published. From those patented principles emerged complex sound chambers and wave-guides, highly engineered drivers, innovative rigging and cabinet designs that play a significant role in the outcome.

The heart of the acclaimed Y-Axis Series is the proprietary Co-Linear Drive Module.

Adamson Co-Linear Drive Module

Adamson's unique "sound chamber within a sound chamber" produces a perfectly curved, iso-phase, co-linear sound source of both mid and high frequency energy. Time-smear, mid lobeing and comb filtering are eliminated, giving the Y-Axis unrivalled sonic accuracy.

The T21 Sub is designed to provide superior sub-bass extension to the Y-Axis Series, by incorporating two Adamson Symmetrical Drive™ SD-21 Kevlar drivers. The unique driver's double spider design employs a balanced spider suspension, with spiders at both ends of the 6" dual voice coil, resulting in extreme stability under high excursions. The neodymium, 21" driver, also boasts Adamson's Advanced Cone Architecture, which significantly reduces cone modes, providing a

Adamson ND15L

linearized response throughout the working passband.

Adamson offers a broad range of true line source array systems:

- Large Format:  
Y-Axis Series - Y18 with T-21 Sub
- Medium Format:  
Y-Axis Series - Y10 with T21 Sub
- Compact Format:  
SpekTrix Series -SpekTrix, -Wave, -Sub
- Ultra Compact:  
Metrix Series

The newly released Ultra Compact Metrix Series comes standard with a choice of 2 rigging options.

The Metrix-i (installation) Series was designed with the permanent installation market in mind, utilizing the semi-permanent EIR™ (Enclosed Installation Rigging) system. It offers a high-end line array option for economically concerned clients working with venues with up to 800-person capacity.

The Metrix-t (touring) Series offer powerful, yet ultra-light enclosures that are easy enough to be flown by a single person using the AIR™ rigging wheel system. The Metrix-t is ideal for companies looking for a main system for club- and theater-sized events, or for corporate gigs. For larger applications, the Metrix Series fulfills various fill, delay or under-hang needs.

The Metrix Sub is an extremely powerful, double 15" Neo/Kevlar, convertible cardioid Sub with built-in AIR™ system, and can be arrayed and flown with both the -t and -i series in various combinations.
