training seminar

Forward

The following represents the Adamson Systems Engineering mandatory training seminar policy. These guidelines are imperative to maintain a standard level of technical expertise, and repeatable excellence in system performance worldwide.

Individual seminars can be tapered for specific clients, but must be executed by certified Adamson personnel. Special care should be taken to schedule training events with actual delivery of the product.

Adamson Y-Axis, Spektrix and Metrix Training

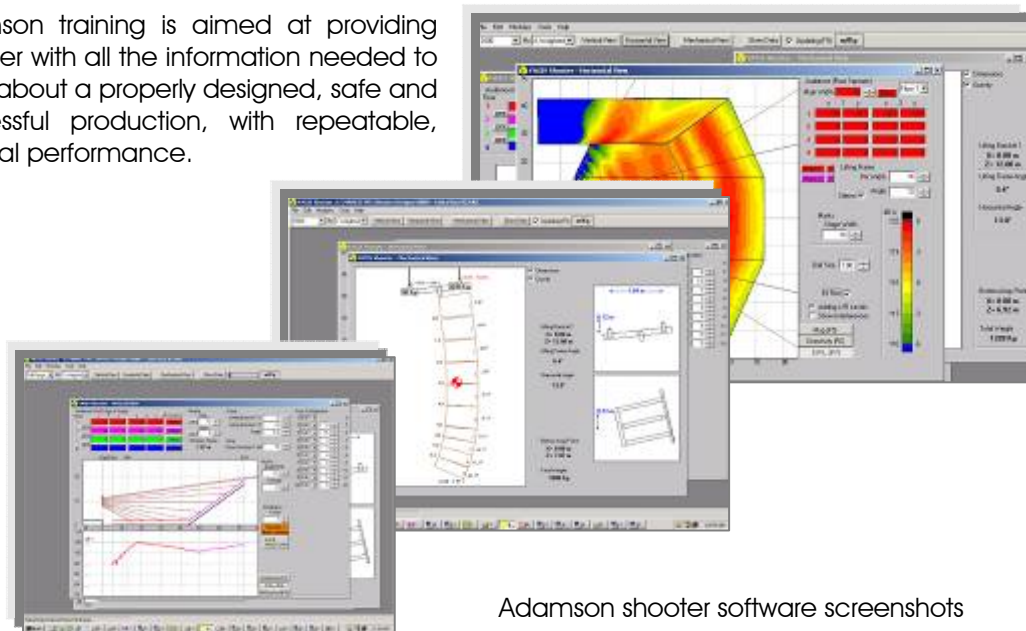

To properly represent and safely operate Y-Axis, SpekTrix and Metrix line array systems, any company that wishes to purchase and/or operate Adamson Y-Axis, SpekTrix and Metrix product is required to attend the Adamson training seminar prior to employing the product in the marketplace.

Hands-on Shooter® Software and Rigging Training

This mandatory seminar is approximately two or three full days pending general knowledge base and system size, and includes practical training.

Adamson training is aimed at providing the user with all the information needed to bring about a properly designed, safe and successful production, with repeatable, optimal performance.

Adamson shooter software screenshots

Each seminar is tailored to the attending engineering staff, and addresses the following topics to the appropriate depth

- True line source array principles
- Governing laws of physics
- Design considerations
- Adamson Y-Axis, SpekTrix and Metrix array Principles
- Rigging
- Processing, amplification
- Audio distribution & system tuning & Limiter settings
- Shooter software training
- Practical training (usually on-location)

Factory authorized training is provided at our Canadian factory facility or at our distribution centres around the world as scheduling allows. Training at our Port Perry, Ontario facility is offered to first time purchasers for \$300 CAD per person to cover administrative costs, which does not include flight, meals and hotel expenses. In facility training costs are negotiable for group rates.

To keep the training schedule as personable and on track, minimum class size starts at 6 persons, and is limited to 15 persons per seminar. A Fee is added for private seminars.

As an alternative, we can arrange to conduct training for your employees and important clients on-location, this can be a cost saving and often more effective option to the purchaser. This

method of training is sometimes preferred, and usually timed to coincide with delivery of the purchased product or the date of a key premiere event.

On-location training can also include arrangements to provide hands-on assistance with the initial deployment of the rig in a live situation, assuring a successful first experience for client and crew alike.

The standard on-location training fee is \$750 CAD per day plus all travel and accommodation expenses, unless specified otherwise in a written and signed agreement. All training handouts, required software and information sheets are provided free of charge by the

trainer. A list of required on-location training aids can be made available to those interested.

This training requirement is final and mandatory, and no distributor or dealer is authorized to handle Y-Axis, SpekTrix or Metrix product prior to having received the above training.
